Report on Parent Survey on Youth Substance Use, Wilton, Connecticut, 2011

Report Prepared by:

Archie C. Swindell, PhD, Quantitative Services

April 13, 2012

ACKNOWLEDGEMENTS

This parent survey was sponsored by the Wilton Task Force to Reduce Underage Drinking, and Positive Directions-The Center for Prevention & Recovery. It was administered in November-December, 2011, with the cooperation and active participation of Wilton Public Schools. A total of 468 parents of students in Middlebrook School (grades 6-8) and Wilton High School (grades 9-12) participated by completing the survey on-line.

This survey was given in conjunction with a survey of youth of the same student population, given during the same time period. The youth survey is the subject of a separate report [1]. The youth survey was derived from the Connecticut Governor's Prevention Initiative for Youth (GPIY) survey, which was designed to ascertain prevalence, attitudes and behaviors related to use of substances (tobacco, alcohol, and illicit drugs). The parent survey uses language about parental perceptions taken directly from the youth survey, and also incorporates questions from the CASA National Survey of American Attitudes on Substance Abuse X: Teens and Parents [2]. All results of the survey are anonymous, and are intended for reporting only in summary form. The organization of this report draws upon reports of GPIY youth surveys for formatting and structure.

Positive Directions is a non-profit agency which has provided treatment, counseling and education programs to individuals and families in Fairfield County, Connecticut, since 1973. Quantitative Services has conducted statistical consulting and analysis for public agencies in Connecticut since 2001, and has provided internet access to youth and parent surveys since 2006.

SUMMARY

Wilton parents participated in a survey of their perceptions and opinions about substance use by their oldest school-aged child (the "index" child) and by other Wilton youth. The survey was completed on-line in November-December, 2011, by 468 parents of youth in grades 6-12. The same survey was taken in 2007 by 335 Wilton parents. In both 2007 and 2011, the parent surveys were given in conjunction with substance-related surveys of Wilton youth. The 2011 parent results are tabulated in four ways: all parents, by grade-group, by gender of the index child, and by parental alcohol use.

According to the youth survey, the prevalence of recent alcohol consumption (i.e., in the previous 30 days) among high school youth (grades 9-12) decreased somewhat, from 43% in 2007 to 34% in 2011. Parents were asked if their child had consumed alcohol in the previous 30 days, and 18-20% of parents of youth in grades 9-12 said Yes, in both 2007 and 2011. Thus, either parents underestimate the use of alcohol by their children, or the survey was more likely to be completed by parents of children who are less likely to use alcohol. Parents were aware of the fact that children who usually spend two hours or more after school without adults present are more likely to drink alcohol, but analysis of the data shows that the parents may not be fully aware of the extent or frequency of drinking.

Parent perceptions that alcohol and marijuana are harmful decreased by about 10 percentage points, 2007 to 2011, but perceived high risk from cigarettes did not change. The availability of all substances decreased, according to parents. Parents of middle school youth thought substances to be more readily available in 2011 than did the youth in their survey. Antisocial activities like bullying or drug use in the neighborhoods have decreased since 2007, according to parents, but parents' perceptions still exceed those of their children. The perception that having friends who do not drink is the best deterrent to their child's drinking has not changed since 2007. Concerns over education of their children have markedly increased since 2007.

About 17% of parents of boys indicated that their child had used alcohol recently, compared to 11% of parents of girls. However, in the youth survey, prevalence of 30-day alcohol use was higher among girls than boys in all grades but one. Parents of boys were more concerned about teen use of alcohol and drugs than parents of girls. The perception of great risk of harm from teen use of both cigarettes and marijuana was high among parents of both genders in all grades, about 80%, but perceived risk from 1-2 alcoholic beverages per week decreased with increasing age of their child, from 75% (grades 6-8) to 55% (grades 11-12).

To determine if parents' perceptions about substances might be influenced by their own use of alcohol, survey results were tabulated by the parent's alcohol use score calculated from reported use patterns. Parents with alcohol consumption scores above the median (higher users) attributed somewhat less harm to all substances than parents with scores below the median (lower users). About 9% of higher users reported that teens other than their own child had consumed alcohol in their homes in the past year, about twice the prevalence of lower users. Lower users reported more secure storage of alcoholic beverages in the home. Higher users reported less drinking by their own child, but prevalence of their child riding with a driver who had been drinking was much greater.

METHODS

The survey instrument used to collect data in 2011 was essentially the same as in 2007 [4]. Both surveys included demographics, and questions from the concomitant youth survey and from a national survey of parents of teens [2]. The survey was implemented via computer on-line, using the SurveyMonkey.com® web site and software. There were extensive efforts to encourage parents to participate, including written notices sent from school, emails, and announcements in the local print media and on the school district web site.

Because there was no way to monitor or validate survey responses, an effort was made to detect spurious answers. An "extreme response" metric was used, in which each of 73 individual survey items contributed a value of 1 if the answer was "extreme", and 0 otherwise. Examples of extreme Q/A are: (1) Q=How safe do you feel your child's school is?; A=Very unsafe; (2) Q=If your child breaks family rules, is he/she usually disciplined?; A=Definitely not true; (3) Q=How concerned are you that your child might try an illicit drug (like cocaine or amphetamine) at some point?; A=Not concerned at all. Extreme values were summed for each respondent. The median was 14, mean was 13.1, and two values (36 and 38) were more than 3 standard deviations above the mean. These two surveys, plus two surveys from the low end of the scale (scores of 1 and 4) were excluded from analysis. This statistical procedure, termed "Winsorizing", is a method of removing outliers without introducing bias, with little loss of power. There was no correlation between extreme response totals and number of entries per IP address, indicating that extreme or prankish entries from one or a few sites had not occurred. Sampling variance for each grade-group in the parent survey is 3-5%, based on approximately 150 respondents and 400 families per group.

A metric for parental alcohol consumption was calculated by adding up the 4-point Likert scores for the five alcohol-related questions in Table 13 for each respondent, subtracting 5, dividing by 15, and multiplying by 100. The score is in the range 0-100, and can be interpreted as a percent of maximum, the maximum being "frequently" to all situations. The median score for all respondents was 40, and parents were classified as equal to or below, or above, the median, for purposes of tabulation.

Survey results are tabulated in four ways: all parents (grades 6-12), by grade-group of the index child (grades 6-8, 9-10, and 11-12), by the gender of the child, and by the alcohol consumption score of the parent (above, or at or below, the median). Each of these categories included comparable numbers of parents in each subset. Categories such as parental perceptions of prevalence of the child's drinking, or the harm of drinking, were not used for tabulations, because these categories are confounded with the age of the child. Responses of Wilton parents in 2011 are compared to responses to the same questions in the 2007 Wilton parent survey and in the 2011 Wilton youth survey, in Tables 26-34. Current data from towns demographically similar to Wilton were not available, to enable other comparisons.

All statistical and tabulation computations were carried out using Statistica® version 10.0 (StatSoft, Tulsa, OK). Data programming and formatting operations were carried out in Microsoft Excel 2010®, and the final report was produced in Microsoft Word 2010® and Adobe Acrobat® 8.0. All software is licensed to Quantitative Services.

RESULTS

More parents responded to this survey in 2011 than in 2007 (468 vs. 335). Numbers in each grade-group were adequate in 2011 for statistical analysis – 112 in grades 6-8, 152 in grades 9-10, and 202 in grades 11-12 (Tables 1,2). All but 4 of the surveys were used for tabulations, following "extreme response" trimming as described in Methods. Most parents described themselves as Caucasian (Table 4), with racial breakdown similar to U.S. Census figures. No tabulations by race or ethnicity were prepared because of low numbers of minorities. Two parents were present in most families (88%), with single-parent families comprising less than 9% of respondents (Table 5).

The "index" child, i.e. the child about whom the parent was asked to respond, was approximately equally divided, boys and girls, in each grade group (Table 6). There were also similar adult alcohol consumption patterns in each grade group. Thus, tabulations by gender of index child, and by adult alcohol consumption, are not confounded with age or school level of child – an important statistical consideration.

The survey was administered on-line using SurveyMonkey® between November 16 and December 16, 2011. Most responses occurred during the first week of offering, and in the first week of December, although significant numbers of responses were entered in the final week. A paper version of the survey was available, but was not used.

* * * *

More than 90% of parents responded to questions about family management by indicating a high degree of awareness of their child's social habits (Table 7). About 10% of parents said their child usually spends more than two hours on weekdays without an adult present. The same question was asked in the youth survey, and prevalences were higher. Among youth in grades 11-12, for example, about 15% of parents indicated their child is without adults more than two hours, compared to about 30% of youth in the same grades. The relationship between time spent without adults and prevalence of alcohol consumption has been documented in many towns, and is also true in Wilton (Figures 1, 2).

Parents were asked about the frequency of their child's use of cigarettes and alcohol (Table 18). Parents indicated that 11% of their children in grades 9-10, and about 26% grades 11-12, had used alcohol at least once in the previous 30 days. These estimates agree with median estimates of alcohol use by their child's classmates (Table 22), but are approximately one-half the prevalences reported by youth in their survey: 25% in grades 9-10 and 47% in grades 11-12. Parents were cognizant of the relationship between time without adults after school and prevalence of alcohol consumption, as indicated in Figure 1 – which graphs the prevalence of any alcohol consumption in the previous 30 days versus time without adults, reported by youth and estimated by parents. Parent estimates are somewhat lower than youth reports, but the relationships (slopes) are similar. In Figure 2, however, parents appear to less aware of the extent of drinking by youth (on 3 or more of the previous 30 days) who spend more than two hours without adults. The data suggest that fewer parents of higher-risk children completed the survey.

Positive family involvement in 2011 was very similar to 2007, with lots of chances to do fun things with the family and support when needed (Table 8). Engagement by parents in school work and activities declines in upper high school grades. Among issues facing parents of teenagers, those rated as most important were education, safety, and making right choices for the future (Table 9). Least important were dropping out of school, and religion. The top issues facing

teens, according to their parents, were acceptance and pressure by peers, coping with stress, and making good decisions (Table 10). Up to half of the parents were concerned that their child might try marijuana or other drug, but most felt they would know what to do if that occurred (Table 11).

Parents whose own alcohol consumption was above the median of 40 (Figure 3) differed in some respects from those with lower reported consumption, although there were no appreciable differences for most measures. Higher alcohol users attributed somewhat less harm to regular use of cigarettes, alcohol and marijuana, although very few parents overall thought these substances are risk-free (Table 14). About 9% of higher users reported that teens other than their own child had consumed alcohol in their home in the past year, compared to 4% of lower users (Table 12). Lower users indicated more secure storage of alcoholic beverages in the home (Table 15), although all parents said they strictly enforce family rules (Table 7). Higher users rated curiosity and "having fun" as important reasons teens begin drinking (Table 16). Fewer higher users indicated that their child had alcohol to drink in the previous 30 days, but a much higher percentage indicated their child had ridden as a passenger with a driver who had been drinking (Table 18). "Fear of addiction" was one of the few strategies to prevent underage drinking on which the two groups disagreed (Table 20).

Parents of boys vs. girls responded essentially the same to most questions, but there were some differences. Boys were asked more often if their homework was done (Table 8). Safety and violence were less of an issue with parents of boys (Table 9), but peer pressure and drugs/alcohol were more of an issue than for girls (Table 10) and there was more concern about the future use of drugs by boys (Table 11). Coping with stress and making good decisions for the future were more issues with girls. Fewer girls were thought to have used alcohol in the previous 30 days (Table 18), and fewer of the peers of girls were thought to have used alcohol or marijuana, or to have played gambling games for money (Table 19). Parents of boys were more convinced of the effectiveness of parental strictness and driving suspension in discouraging underage drinking (Table 20). Most parents were at least "somewhat" satisfied with the quality of education of their child, but about 10% of parents of girls indicated dissatisfaction, compared with 6% of parents of boys. Girls generally earned higher grades than boys (Table 21).

There were some changes in opinions of parents, 2007 to 2011. For parents of youth in grades 9-12, there was a decrease of about 10 percentage points in perceived risk of great harm from use of alcohol and marijuana by youth, but no change in risk from cigarettes (Table 27). The perception that substances (cigarettes, alcohol, marijuana, and other illicit drugs) are easily available to youth decreased substantially. Parents of middle school youth thought the substances to be more readily available than did the youth themselves (Table 28). Parents tended to perceive neighborhoods as harboring more bullying and drug use than their children reported (Table 29). Opinions about family management (Table 30) and strategies to prevent underage drinking (Table 31) were remarkably stable. Perceived reasons teens begin drinking also showed little change from 2007, but were not closely aligned with opinions of the teens themselves (Table 32). Concerns of parents of teens, and teens themselves, were similar, 2007 to 2011, except for educational issues – which have greatly increased since 2007 (Table 34, 35).

Survey Instrument

Wilton Parent Survey 2011

1. Introduction

This survey is sponsored by Positive Directions on behalf of the Wilton Taskforce to Reduce Substance Abuse Among Youth. Positive Directions--The Center for Prevention and Recovery, has been reaching out to individuals, families and communities in Fairfield County since 1973, providing treatment, counseling and education programs focused on the prevention of and recovery from substance abuse and dependencies.

To encourage you to answer honestly, this survey is completely anonymous.

This survey is open to all parents of Wilton high school and middle school students. In taking the survey, you represent the parents of all Wilton youth. Your cooperation is **very important** in obtaining a scientifically accurate picture of community attitudes. So please, take a few minutes to fill out the survey, whether you hold strong opinions or not. There are 37 questions.

Questions in this survey mirror some of the questions being asked of area youth. Other questions are taken from national and regional surveys. Summary results will be made public as soon as tabulation and analysis is complete.

When you have completed the survey, click **Done>>** at the end. Until you do so, you may back up and change answers.

2. School, Relationships (1)

In this survey, please answer questions about "YOUR CHILD" in terms of

YOUR OLDEST CHILD WHO IS PRESENTLY ENROLLED IN PUBLIC SCHOOL.

| 1. " | MY OLDEST CHILD" I am referring to in this survey is in grade: |
|------|---|
| 0 | 6 or Below |
| 0 | 7 |
| 0 | 8 |
| 0 | 9 |
| 0 | 10 |
| 0 | 11 |
| 0 | 12 |
| 2. V | What is the gender of your oldest child that you are referring to in this survey? |
| 0 | Female |
| 0 | Male |
| 0 | Both (Siblings in same grade) |
| | |

| Wilton Parent Survey 2011 | |
|--|--|
| 3. On a regular weekday, how many \underline{hours} does your child spend after school $\underline{without}$ an adult present? | |
| O None | |
| C Less Than 1 Hour | |
| C 1 To 2 Hours | |
| C 3 To 4 Hours | |
| O More Than 4 Hours | |
| 4. On a typical weekend, how many <u>hours per day</u> does your child spend <u>without</u> an adult | |
| present? | |
| O None | |
| C Less Than 1 Hour | |
| C 1 To 2 Hours | |
| C 3 To 4 Hours | |
| C 5 To 8 Hours | |
| More Than 8 Hours | |
| 5. Thinking of the structure of your family, do the adults in your household include: | |
| O Both biological parents | |
| C Two adoptive parents | |
| One biological parent and one step-parent | |
| C Two foster parents | |
| Only one parent (or one legal guardian) | |
| One parent, but frequent visits to the other parent | |
| C Relative(s) who act as parents | |
| Other (please specify) | |
| | |
